

Dimensions of Equipment

Free Standing Pole

A free standing pole also known as a x stage can be assembled at your venue , the height of this is just under 10 foot so the ceiling would need to be at least 10.5foot to assemble the stage, it can also go outside.

Fixed Pole

A fixed pole, I have multiple fixed poles. when I say fixed there is no screwing and holes the pole is just held up on a spring mechanism with the weight from the top and the bottom these give you more options with height but must be places on a beam, you can read more about this on the x pole website if you feel weary as my poles are official X poles. these can be made as small as 8 foot (a average ceiling) and as high as 10 foot, I can also make them as high as 12 foot but would need notice as I would need to order a extra extension which I would also need to be reimbursed for , they are around £17.

Hoop Stage

The hoop stage , the easiest way to explain the hoop stage is to think of the frame of a swing in a park and that my stage. it is 8.7 foot high and approximately 3.5 foot wide and 5 foot long.
